Functional Coatings for Corrosion Protection

Volume 2

Editor and Lead Author
Vikas Mittal

Contents

Preface	XI
1. Polymeric Pipeline Coatings for Oil and Gas Industry	1
1.1 Introduction	1
1.1.1 Pipeline Coatings	1
1.1.2 Requirements for Long Lasting Performance of Coatings	2
1.2 Advancements in Polymeric Pipeline Coatings: A Brief Summary	2
1.3 Polymeric Pipeline Coatings	4
1.3.1 Polyolefin Based Pipeline Coatings	4
1.3.2 Epoxy Based Pipeline Coatings	11
1.3.3 Polyurethane Based Pipeline Coatings	18
1.3.4 Fluoropolymer Based Pipeline Coatings	23
1.4 Conclusions	28
References	29
2. Ionic Liquids and Poly(ionic liquid)s Based Coatings	37
2.1 Introduction	37
2.2 Poly(ionic liquid)s Based Coatings	39
2.2.1 Poly(ionic liquid)s Based Protective Coatings	39
2.2.2 Poly(ionic liquid)s Based Sorbent Coatings	41
2.2.3 Other Functional Coatings Based on PILs	43
2.3 Ionic Liquids Based Coatings	45
2.3.1 Ionic Liquids Based Coatings for Titanium	45
2.3.2 Ionic Liquids Based Coatings for Copper	47
2.3.3 Ionic Liquids Based Coatings for Steel	49

2.3.4	Ionic Liquids Based Coatings for Aluminum	50
2.3.5	Ionic Liquids Based Coatings for Magnesium Alloy	51
2.3.6	Other Functional Coatings Based on ILs	53
2.4	Ionic Liquids Based Electrodeposited Al Coatings	54
2.4.1	Coatings for Steel	55
2.4.2	Coatings for Copper	56
2.4.3	Coatings for Gold	56
2.4.4	Coatings for Magnesium Alloy	57
2.4.5	Coatings for Neodymium Iron Boron (NdFeB) Magnet	57
2.4.6	Coatings for Other Purposes	58
2.5	Conclusions	60
	References	60
3.	Carbon Based Coatings	73
3.1	Introduction	73
3.2	Mesoporous Carbon Coatings	74
3.2.1	Fabrication	74
3.2.2	Characterization and Testing	77
3.2.3	Applications	79
3.3	Amorphous Carbon Based Coatings	80
3.3.1	Fabrication	80
3.3.2	Characterization and Testing	82
3.3.3	Applications	85
3.4	Coatings Based on Pyrolytic Carbon and Carbon Black	86
3.4.1	Fabrication	86
3.4.2	Characterization and Testing	88
3.4.3	Applications	89
3.5	Coatings Based on 'Carbon Alcohols' as Source	90
3.5.1	Fabrication	90
3.5.2	Characterization and Testing	91
3.5.3	Applications	92
3.6	Coatings Based on Graphene and Other Related Materials	92
3.6.1	Fabrication	93

<i>Contents</i>	VII
3.6.2 Characterization and Testing	95
3.6.3 Applications	98
3.7 Miscellaneous Carbon Coatings	98
3.7.1 Fabrication	99
3.7.2 Characterization and Testing	100
3.7.3 Applications	103
3.8 Conclusions	103
References	104
4. Self-Healing Anti-Corrosion Coatings Embedded with Graphene and Graphene Oxide based Containers Encapsulating Corrosion Inhibitor in Polyelectrolyte Complexes	109
4.1 Introduction	109
4.2 Experimental	111
4.2.1 Materials	111
4.2.2 Preparation of Gr and GO Based Containers	111
4.2.3 Zeta Potential	112
4.2.4 Preparation of Composite Coatings	113
4.2.5 Fourier-transform Infrared Spectroscopy (FTIR)	113
4.2.6 Immersion Tests	113
4.2.7 UV Weathering Analysis	113
4.2.8 Electrochemical Analysis	114
4.3 Results and Discussion	114
4.4 Conclusion	130
References	132
5. Self-healing Protective Coatings of Polyvinyl Butyral/Polypyrrole-Carbon Black Composite on Carbon Steel	137
5.1 Introduction	137
5.2 Experimental	139
5.2.1 Materials	139
5.2.2 Preparation of PVB/PPyCB Formulations	139
5.2.3 Application of Composite Formulations on Carbon Steel	139

5.2.4	Electrochemical Measurements	140
5.2.5	Immersion Test	141
5.2.6	Characterization Techniques	141
5.3	Results and Discussion	142
5.3.1	Morphology of the PVB/PPyCB Composite Coatings	142
5.3.2	Electrochemical Measurements	144
5.3.3	Immersion Test	155
5.3.4	Protective Performance of Graphene Incorporated PVB/PPyCB Composite Coatings	158
5.4	Conclusions	162
	References	164
6.	UV Degradation of Polymer Coatings	169
6.1	Introduction	169
6.2	Mechanism of UV Degradation	172
6.3	Different Polymer Coatings Systems	174
6.3.1	PU Coatings	174
6.3.2	Acrylic Coatings	175
6.3.3	Epoxy Coatings	178
6.3.4	Polyester Coatings	179
6.3.5	Silicone Coatings	180
6.4	Summary and Outlook	180
	References	180
7.	Graphene for Corrosion Protection	187
7.1	Introduction	187
7.2	Effect of Graphene on Electrochemical Properties of Carbon Steel in a Saline Media	189
7.2.1	Materials and Methods	189
7.2.2	Results and Discussion	191
7.3	Effect of Unmodified Graphene Platelets (UGP) on Electrochemical Properties of Polymer Coatings	195
7.3.1	Materials and Methods	195
7.3.2	Results and Discussion	198
7.4	Effect of Functionalized Graphene Platelets on Electrochemical Properties of Polymer	204

Coatings	
7.4.1 Materials and Methods	204
7.4.2 Results and Discussion	205
7.5 Effect of Functionalized Graphene Platelets with Polyaniline on Electrochemical Properties of Polymer Coatings	208
7.5.1 Materials and Methods	208
7.5.2 Results and Discussion	210
7.6 Conclusions	213
References	214
8. Inhibition of Corrosion by Polyetherimide-Graphene Nanocomposite Coatings for Long Term Protection of Carbon Steel	219
8.1 Introduction	219
8.2 Experimental	222
8.2.1 Materials	222
8.2.2 Preparation of PEI-Graphene Coatings	222
8.2.3 Characterization Techniques	223
8.2.4 Immersion Tests	223
8.2.5 Electrochemical Analysis	224
8.3 Results and Discussion	224
8.4 Conclusions	239
References	240
9. Effect of GO and rGO on the Corrosion Resistance of PMMA Nanocomposite Coatings	245
9.1 Introduction	245
9.2 Experimental	246
9.2.1 Materials	246
9.2.2 Substrate Preparation	247
9.2.3 Preparation of Coatings	247
9.2.4 Characterization Techniques	248
9.2.5 Electrochemical Analysis	248
9.3 Results and Discussion	249
9.4 Conclusions	264
References	264

10. Anti-microbial Polymeric Materials and Coatings	269
10.1 Introduction	269
10.2 Different Anti-microbial Polymeric Materials and Coatings	270
10.3 Conclusions	279
References	280
Index	291

About the Book

Corrosion involves the degradation of metals due to the oxidation and reduction processes occurring during the interaction of the metallic surfaces with the aggressive environments. These electrochemical processes result in the impairment of materials' physical and mechanical properties such as strength and ductility. Application of coatings is the most widely used method for the corrosion protection of the metallic structures. Specifically, the polymeric coatings (or reinforced polymer coatings) protect the metal substrates from external corrosive agents by acting as an effective barrier. Besides that, depending on the morphology and structure of polymers, the coatings possess the properties like thermal, chemical and mechanical stability. These properties combined with the ability to strongly adhere to metal surfaces yield durable coatings with longer service lifetime compared with other metallic and inorganic coatings. The purpose of this book is to assimilate the recent advances in the field of functional coatings systems for achieving effective corrosion protection.

About the Editor

Dr. Vikas Mittal works as Associate Professor in the Department of Chemical Engineering at Khalifa University of Science and Technology, Abu Dhabi, UAE. Before, he was employed at BASF, Germany as polymer engineer and at SunChemical, UK as materials scientist. Dr. Mittal received his PhD degree in 2006 from Department of Materials and Department of Chemistry and Applied Biosciences at Swiss Federal Institute of Technology (ETH) Zurich, Switzerland. He has been an active researcher in the field of polymer nanotechnology and its applications in various streams. He has published more than 125 peer reviewed papers on these subjects, along with 35 edited and authored books. His research accomplishments have also resulted in many patents. In addition, he has published many book chapters and has also delivered numerous keynote and invited lectures.
