Preface xiii

Foreword xv

1. The invention and early development of ion chromatography

HAMISH SMALL

- The resin-clumping problem 4
- 1971—Breakthrough 5
- A new route to low capacity anion exchangers 7
- 1972–73 expansion and acceptance 8
- Colloidal form anion exchangers 9
- The carbonate eluent system 10
- Patenting and licensing 11
- Dow research post-1975 12
- Intangibles 13
- References 13

2. Stationary phases and suppressors in ion chromatography, 1975–2000

CHRISTOPHER POHL

- Conclusion 41
- References 41

3. Stationary phases in ion chromatography

CHRISTOPHER POHL

- Introduction 43
- Columns for separation of suppressor compatible cations 45
- Columns for separation of suppressor compatible anions 64
- Columns for separation of carbohydrates 120
- Mixed-mode columns 133
- Columns for separation of amino acids 136
- Columns for separation of transition metals 139
- Ion exclusion and Ion-exclusion phases 142

- Mobile phase ion chromatography (MPIC) and MPIC phases 146
- Column cleanup and regeneration 154
- References 156

4. Suppressors in ion chromatography

KANNAN SRINIVASAN

- Introduction 157
- Flat membrane chemical suppressor 159
- Flat membrane electrolytic suppressor 163
- Suppressor practical use recommendations 168
- Suppressor form and continuous suppression 169
- Retention in the suppressor 171
- Dynamic suppression capacity 171
- Need for hydration 171
- Suppressor selection 172
- Suppressor installation 172
- Chemical suppressor operation 173
- Electrolytic suppressor operation 173
- Role of the sample matrix 173
- Conclusions 174
- References 174

5. Electrolytic eluent generators and their applications in ion chromatography

YAN LIU AND NEBOJSA AVDALOVIC

- Introduction 177
- Earlier studies of electrochemistry involving ion-exchange membranes and resins 177
- Large-capacity electrolytic base and acid eluent generators 180
- Electrolytic salt eluent generators 184
- Higher pressure electrolytic eluent generators 187
- Capillary-scale electrolytic base and acid generators 189
- Continuously regenerated trap columns (CR-TC) 189
- RFIC systems and their applications 190
- A practical guide for successful use of eluent generator cartridges in RFIC systems 196
- Conclusions 200
- References 201

6. Electrolysis-based accessories in ion chromatography

KANNAN SRINIVASAN

- Introduction 203
- CR-TC practical use recommendations 209
- Salt converter cation suppressor 210
- Salt converter practical use recommendations 213
- Electrolytic regenerant concentrator (ERC) for carbonate removal device (CRD) 214
- Electrolysis-based buffer generators 216
- References 218

7. Eluent regeneration and ion reflux devices and their applications in ion chromatography

YAN LIU

- Introduction 219
- Ion chromatography systems with eluent regeneration 220
- Ion chromatography systems with ion reflux 224
- Conclusions 231
- References 232

8. A practical guide for carbohydrate determinations by high-performance anion-exchange chromatography with pulsed amperometric detection (HPAE-PAD)

JEFFREY ROHRER

- Introduction 233
- Liquid chromatography system for HPAE-PAD 234
- Eluents for HPAE-PAD 235
- Water 235
- Sodium hydroxide 236
- Sodium acetate 236
- Installation of eluents 237
- Eluent generation for hydroxide eluents 237
- Other eluents 237
- Column choice, installation, and care 238
- Electrochemical detector and cell 239
- Additional autosampler considerations 240
- Sample considerations 241
- Other considerations 241
- Common HPAE-PAD applications 242
- Monosaccharide analysis of glycoproteins 242
- Sialic acid analysis of glycoproteins 244

- Carbohydrate analysis of biofuel-related samples 248
- Glycoprotein asparagine-linked oligosaccharide profiling 250
- HPAE-PAD analysis of N-linked oligosaccharides coupled to mass spectrometry 254
- Summary 255
- Acknowledgment 255
- References 255

9. Multidimensional techniques in ion chromatography

KANNAN SRINIVASAN

- Introduction 259
- Multidimensional approach practical use recommendations 266
- References 267

10. A practical guide for amino acid determinations by high-performance anion-exchange chromatography with integrated pulsed amperometric detection

JEFFREY ROHRER AND NEBOJSA AVDALOVIC

- Introduction 269
- Liquid chromatography system for AAA-Direct 270
- Eluents for AAA-Direct 271
- Column installation and care 272
- Installation of the electrochemical cell 274
- Applications 276
- Additional recommendations 284
- References 285

11. Ion chromatography methods that use electrochemical detection

JEFFREY ROHRER AND NEBOJSA AVDALOVIC

- Introduction 287
- Ion chromatography system for electrochemical detection methods 287
- Eluents for IC with electrochemical detection methods 288
- Column installation and care 288
- The electrochemical cell 289
- Applications 290
- Acknowledgments 300
- References 300
