

Progress in Biochemistry and Biotechnology

BACTERIAL PHYSIOLOGY AND BIOCHEMISTRY

Ivan Kushkevych

Edited by Josef Jampilek

CONTENTS

ACKNOWLEDGEMENTS.....	ix
ABBREVIATIONS.....	xi
FOREWORD.....	xiii
CHAPTER 1. INTRODUCTION INTO BACTERIAL PHYSIOLOGY AND BIOCHEMISTRY	1
1.1. Subject of study	1
1.2. Bacteria in the phylogeny of living organisms and diversity of cell shapes	3
1.3. Bacterial evolution	7
1.4. Methods of studies of bacterial properties	11
CHAPTER 2. BACTERIAL CHEMICAL COMPOSITION AND FUNCTIONAL CELL STRUCTURES	23
2.1. Elemental composition	23
2.2. Compounds composition	24
2.3. Bacterial nucleus	33
2.4. Cytoplasm	36
2.5. Plasma membrane	44
2.6. Cell wall	50
2.7. Flagella, pilus, and fimbria	64
2.8. Bacterial capsule	72
2.9. Endospores	77
2.10. Pigments	85
CHAPTER 3. BACTERIAL NUTRITION AND GROWTH	91
3.1. Basic sources of nutrition	91
3.2. Sources of carbon	92
3.3. Sources of nitrogen.....	94
3.4. Mineral nutrition.....	95
3.5. Growth factors.....	98

3.6. Sources of energy	108
3.7. Transport of compounds across the plasma membrane.....	110
3.8. Passive transport.....	111
3.9. Active transport	112
3.10. Transport of iron and its regulation	116
3.11. Transport of proteins	124
3.12. Group translocation	126
3.13. Bacterial growth and multiplication	127
3.13.1. Growth under conditions of static cultivation.....	130
3.13.2. Growth constants.....	133
3.13.3. Deviations from normal growth curve	136
3.14. Multiplication of microorganisms under conditions of continuous (<i>dynamic</i>) cultivation.....	138
3.15. Synchronous multiplication	145
3.16. Bacterial cell cycle	146
CHAPTER 4. PROCESSES OF CELL DIFFERENTIATION.....	151
4.1. Characteristics of differentiation processes.....	151
4.2. Polar differentiation in species of <i>Caulobacter</i> genus.....	153
4.3. Differentiation of photosynthetic membranes in facultative phototrophic bacteria.....	156
4.4. Formation of heterocyst in cyanobacteria under bound nitrogen deficiency	157
CHAPTER 5. BACTERIAL METABOLISM	159
5.1. Energy of biochemical reactions	160
5.2. Carriers of hydrogen.....	163
5.3. Role of ATP and its formation in bacterial cells.....	166
5.4. Types of phosphorylation	173
5.5. Processes of catabolism.....	176
5.5.1. Catabolism of carbon compounds and fermentation.....	177
5.5.1.1. Ethanol fermentation.....	179
5.5.1.2. Lactic acid fermentation	183
5.5.1.3. Pentose sugars fermentation	185
5.5.1.4. Propionic acid fermentation pathway	188
5.5.1.5. Butyric acid fermentation and solvent formation	190
5.5.1.6. Mixed acid fermentation pathway	195
5.5.1.7. Fermentation of sugars and polysaccharides	198
