

# SUSTAINABLE & **GREEN** ELECTROCHEMICAL SCIENCE & TECHNOLOGY

KEITH SCOTT

WILEY

## Contents

Preface *xiii*

Acknowledgement *xv*

|          |                                                                   |           |
|----------|-------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction to Electrochemical Sustainable Processes</b>      | <b>1</b>  |
| 1.1      | Introduction                                                      | 1         |
| 1.2      | Effluent Treatment and Recycling                                  | 3         |
| 1.3      | Green Electrochemistry                                            | 3         |
| 1.4      | Electrochemistry and Energy Sustainability                        | 4         |
| 1.5      | Hydrogen Economy and Fuel Cells                                   | 7         |
| 1.5.1    | The Hydrogen Economy                                              | 7         |
| 1.5.1.1  | Hydrogen Generation, Storage and Use                              | 10        |
| 1.5.2    | Fuel Cells                                                        | 22        |
| 1.6      | Conclusions                                                       | 24        |
|          | References                                                        | 25        |
| <b>2</b> | <b>Electrochemistry, Electrocatalysis and Thermodynamics</b>      | <b>27</b> |
| 2.1      | The Electrochemical Cell                                          | 27        |
| 2.1.1    | Faraday's Law                                                     | 29        |
| 2.2      | Electrochemical Thermodynamics                                    | 29        |
| 2.2.1    | Gibbs Free Energy                                                 | 29        |
| 2.2.2    | Free Energy and Equilibrium Constants                             | 30        |
| 2.2.3    | Free Energy and Cell Potentials                                   | 31        |
| 2.2.3.1  | Cell Potential versus pH Diagrams                                 | 35        |
| 2.3      | Types of Electrochemical Reactions                                | 38        |
| 2.3.1    | Electric Double Layer                                             | 39        |
| 2.3.2    | Electrochemical Reaction                                          | 40        |
| 2.3.3    | Electrochemical Kinetics                                          | 43        |
| 2.3.3.1  | Activation Energy for Electron Transfer                           | 44        |
| 2.3.4    | A Model of Electrode Kinetics                                     | 45        |
| 2.3.4.1  | Experimental Behaviour                                            | 47        |
| 2.3.4.2  | The Generalized Butler–Volmer Equation                            | 49        |
| 2.4      | Mass Transport and Electrochemical Reactions                      | 49        |
| 2.4.1    | Electrode Kinetics and Mass Transport                             | 51        |
| 2.4.2    | Butler–Volmer Equations and Departure from Equilibrium Potentials | 53        |
| 2.4.3    | Multistep Reactions                                               | 54        |

|          |                                                           |           |
|----------|-----------------------------------------------------------|-----------|
| 2.4.4    | The Role of Adsorption                                    | 56        |
| 2.4.5    | The Hydrogen Electrode and Oxygen Electrode Reactions     | 58        |
| 2.4.5.1  | Hydrogen Oxidation and Evolution                          | 58        |
| 2.4.5.2  | The Oxygen Electrode                                      | 60        |
| 2.4.6    | Voltammetry and the Platinum Electrode                    | 62        |
| 2.4.6.1  | Cyclic Voltammetry                                        | 63        |
| 2.4.7    | Rotating Disc Electrode                                   | 67        |
| 2.4.7.1  | Koutecky–Levich Analysis                                  | 68        |
| 2.4.8    | Rotating Ring Disc Electrode                              | 70        |
| 2.5      | Photoelectrochemistry                                     | 73        |
| 2.5.1    | Semiconductors and Light Absorption                       | 74        |
| 2.5.2    | Electron Transfer at Semiconductor Electrodes             | 76        |
| 2.5.3    | Current–Potential Relations                               | 78        |
| 2.6      | Electrochemical Impedance Spectroscopy                    | 80        |
| 2.6.1    | Polarization Resistance                                   | 82        |
| 2.6.2    | Warburg Impedance                                         | 84        |
|          | References                                                | 84        |
| <b>3</b> | <b>Electrochemical Cells, Materials and Reactors</b>      | <b>87</b> |
| 3.1      | Electrochemical Reactors                                  | 87        |
| 3.1.1    | Current Efficiency                                        | 87        |
| 3.1.2    | Production Rates                                          | 88        |
| 3.1.3    | Energy Requirements                                       | 89        |
| 3.1.3.1  | Cell Voltage                                              | 90        |
| 3.1.4    | Energy Requirements and Efficiency in Hydrogen Production | 92        |
| 3.1.4.1  | Thermodynamics of Steam Electrolysis                      | 94        |
| 3.1.4.2  | Efficiency of Water Splitting to Hydrogen                 | 95        |
| 3.2      | Fuel Cells                                                | 97        |
| 3.2.1    | Fuel Cell Efficiency                                      | 97        |
| 3.2.2    | Practical Efficiencies                                    | 98        |
| 3.2.3    | Fuel Cell Voltage                                         | 98        |
| 3.2.4    | Mass Transport and Concentration Effects                  | 98        |
| 3.2.5    | Fuel and Oxidant Crossover                                | 99        |
| 3.2.6    | Figures of Merit                                          | 100       |
| 3.3      | Batteries                                                 | 101       |
| 3.3.1    | C-Rate                                                    | 102       |
| 3.4      | Capacitors                                                | 103       |
| 3.4.1    | Asymmetric Supercapacitors                                | 106       |
| 3.5      | Electrochemical Cell Engineering                          | 106       |
| 3.5.1    | Cell Designs                                              | 106       |
| 3.5.1.1  | Temperature Control                                       | 109       |
| 3.5.1.2  | The Distribution of Power and Current                     | 110       |
| 3.5.2    | Three-Dimensional Electrodes                              | 112       |
| 3.5.3    | Cell Components and Materials                             | 114       |
| 3.5.3.1  | Electrode Materials                                       | 114       |
| 3.5.3.2  | Electrodes                                                | 115       |
| 3.5.3.3  | Cell Membranes                                            | 117       |
